

Anomalycode	Gravity	LabelEN
00014-017	BLOCK	Company number - Employer not present in the repertory
00014-155	BLOCK	Company number - No or expired mandate
00014-237	BLOCK	Company number - Inconsistency between the reference stated in the form and the reference stated in the header of the form
00024-152	BLOCK	INSS - No valid work relationship found for the specified period or date
00024-179	BLOCK	INSS - INSS unknown
00024-232	BLOCK	INSS - No employer is associated with this natural person
00024-237	BLOCK	INSS - Inconsistency between the reference stated in the form and the reference stated in the header of the form
01004-237	BLOCK	Calendar year - Inconsistency between the reference stated in the form and the reference stated in the header of the form
01047-008	BLOCK	Language - Not in the domain of definition
90059-102	BLOCK	Form - XML syntax not correct
90059-272	BLOCK	Form - Already processed or declared
FLA01-001	BLOCK	FLA declaration - Not present
FLA01-272	WARNING	FLA declaration - Already processed or declared
FLA04-272	WARNING	Training rights - Already processed or declared
FLA04-325	BLOCK	Training rights - Outdated declaration
FLA04-420	BLOCK	Training rights - The number of days declared exceeds the number of days in the period
FLA04-450	BLOCK	Training rights - Declaration type temporarily prohibited for the selected period
FLA05-272	WARNING	List trainings - Already processed or declared
FLA05-325	BLOCK	List trainings - Outdated declaration
FLA05-420	BLOCK	List trainings - The number of days declared exceeds the number of days in the period
FLA15-260	BLOCK	Training - Number of hours too high
FLA15-272	BLOCK	Training - Already processed or declared
FLA15-420	BLOCK	Training - The number of days declared exceeds the number of days in the period
FLA15-450	BLOCK	Training - Declaration type temporarily prohibited for the selected period
FLA19-019	BLOCK	First start date of the training - Incompatible with the year of the start date of the reference period
FLA20-014	BLOCK	Last end date of the training - End date prior to start date
FLA23-008	BLOCK	Training type - Not in the domain of definition
FLA24-008	BLOCK	Training place - Not in the domain of definition
FLA26-008	BLOCK	Result of the training - Not in the domain of definition
FLA27-008	BLOCK	Training has led to obtaining a certificate - Not in the domain of definition
FLA28-062	WARNING	Certificate validity start date - Zone not applicable
FLA29-014	BLOCK	Certificate validity expiry date - End date prior to start date

Anomalycode	Gravity	LabelEN
FLA29-062	WARNING	Certificate validity expiry date - Zone not applicable
FLA30-008	BLOCK	Scope - Not in the domain of definition
FLA31-001	BLOCK	Reference number of hours in a working day - Not present
FLA36-272	BLOCK	Details of a training period - Already processed or declared
FLA37-399	BLOCK	Training start date - Start date earlier than start date of the parent block
FLA38-014	BLOCK	Training end date - End date prior to start date
FLA38-097	BLOCK	Training end date - Incompatibility of reference period
FLA38-400	BLOCK	Training end date - End date later than end date of the parent block
FLA39-008	BLOCK	Training status - Not in the domain of definition
FLA39-187	WARNING	Training status - Reservation impossible
FLA39-511	BLOCK	Training status - Incompatible with the result of the training

Additional information for BATCH channel only

If a declaration is rejected by the channel itself (and thus the file does not reach Sigedis) then it is possible that the response file contains anomaly codes that are not specific to the Federal Learning Account. These generic anomaly codes are not described in the Federal Learning Account documentation.

To know the meaning of the anomaly, you must analyze the code:

1) The first part of the anomaly code contains the number of the zone it relates to. The XML tag of that zone is often repeated in the field following <tagName>.

2) The second part of the anomaly tag contains the anomaly code. The definition of that code can be found in annex 30 of the Social Security structured annexes.

https://www.socialsecurity.be/lambda/portail/glossaires/bijlagen.nsf/web/Bijlagen_Home_Fr

Usually a declaration is rejected by the channel itself if the XML does not follow the structure defined in the XSD (Note that the order of the fields is important) or because certain values are not accepted by the XSD.

Example:

The anomaly " 00296-008 Identification- Not in the domain of definition " is obtained if the field « Identification » does not contain a correct value.
